DENTAL CARE IS ESSENTIAL!

Dental disease is the most common and yet most neglected problem in the general health of our pets. Eighty-five percent of all dogs and cats over two years of age have some degree of periodontal disease. Periodontal disease causes pain and infection of the oral cavity. Left untreated periodontal disease will lead to loss of teeth and can predispose your pet to disease of the liver, kidney, heart and lungs.

Give your pet the gift of health with a professional dental cleaning!

Call for an appointment today, so one of our veterinarians can make the appropriate recommendations for your pet.
